PROJECT SUMMARY

METHODOLOGY

The following is a Summary of How the shallow water well will be constructed:

The steps are as follows:

1. Site preparation which includes the digging of two pits and two drains
2. The process of drilling of the soil then begins
3. Materials needed to complete the drilling process are Bentonite and mud
4. Completion of drilling the depth of the well will be 120-140ft maximum
5. Gravel packing with stone, Bentonite and cement is applied to the completed process
