

Environmental Protection Agency

Notice to the Public

Pursuant to Section 11(2) of the Environmental Protection Act, Cap. 20:05, Laws of Guyana, the Environmental Protection Agency (EPA) has screened the application for the grant of an environmental permit for the following proposed project:

1. Alya Construtora S.A./ Source One Oil and Gas Supplies – Construction and Operation of a Stone Quarry located at Malali Village, Region Ten (10).

The EPA has determined that this project will not significantly affect the environment, and is therefore exempt from the requirement to conduct an Environmental Impact Assessment (EIA). The reasons for its decision include:

1. Impacts have been characterized to be of medium to low significance since the project site is surrounded by similar land-use activities and vegetative buffer zones will be demarcated and maintained.
2. The project is located within the confines of the Amerindian title land Malali, where the Malali Village settlement is located approximately 7km East of the proposed project site.
3. The project developer has obtained permission from the Malali Village Council and will work in tandem with the community to foster a mutually beneficial development.
4. Impacts from noise will be low to moderate and periodic. Impacts will be confined to the production activities area. Employees will wear their necessary protective gear to minimise the impact of noise during operation.
5. Air quality may be affected by stripping and blasting activities allowing for increased fugitive dust levels and the generation of combustion gases produced from heavy-duty machinery. However, these impacts would be within the confines of the immediate project area and can be effectively mitigated by preventative maintenance of heavy-duty machinery and the implementation of control measures such as wet suppression.
6. Loss of biodiversity and habitats may occur as a result of the removal of vegetation and forest fragmentation. The clearing of vegetation and the extraction of materials in stages will allow for more effective management and control of impacts which will, in turn, reduce habitat destruction and allow for biodiversity migration.
7. Surface water quality may be affected by sediment load occurring from loose soil and sediments in storm runoff given the fact that the area is undulating. There will be no direct discharge of effluent into any Creek or surface water body. Sedimentation ponds will also be established to treat effluents generated on the project site.

8. The developer will ensure that waste will be recycled and reused as well as utilize appropriate disposal techniques in keeping with the Agency's Hazardous Waste Guidelines.

Please be advised that this decision is in no way an indication that this project is approved.

The reasons for our decision are available at the following links on our website:

Please be advised that this decision is in no way an indication that this project is approved.
