## Introduction

GUYCRETE is a locally registered company owned by Guyanese citizens, who are passionate about the development of Guyana. The Company is mainly involved in the manufacturing of Precast Concrete Utility Poles.

Our operation is located at a rented facility at BLOCK 5E Enmore East Coast Demerara, we have applied for 3 acres of industrial lands, which will aid in the efficient and productive development of this business type, however thus far a facility has not been allocated.

This operation is carried out using raw materials such as sand, stone, cement, steel, pvc pipes and water supplied by Guyana Water Incorporated. Electricity is supplied by a 5,000 watts KVA generator. Disposal of solid waste is done by a garbage disposal company once weekly.

We have approximately 8 employees which are broken into 2 teams; team 1 is responsible for the tying of the steel while team 2 combines most of the raw materials in a Ransom, which is then poured into special molds that were manufactured locally to suit various sizes; after 24 hours the posts are then transferred to a curing section for 7-14 days. Additionally strength testing is done weekly on cubes to ensure strengths are maintained.

## Impact on the Environment

Guycrete Inc. in no way threatens the safety of the environment as we are not in close proximity to residential properties nor do we utilize hazardous materials.
