FORESTRY DEPARTMENT

This existing logging is located at Ess 01/24, Right Bank East Kaburi River, Northern Tumatumari Ridge. Having approximately UTM geographic coordinates of 02 92 762 E, 06 02 505 N.

This project activity is to undertake logging operation in a State Forest Authorization (SFA) No: Ess 01/24 of an approximate area of 4,085 Hectares (10,094 acres) which was issued by the Guyana Forestry Commission on 25th January, 2024. To date the capital investment for the operation is a total three (3) million Guyana dollar and an estimated annual turnover of two (2) million Guyana dollars. The operation has the potential to produce approximately 1100 running ft of greenheart piles per month.

Construction Phase

Land clearing is done with chain saws and cutlasses for the establishment of the camps. The vegetation that are cleared for the establishment of camps are used as landfilled material for the maintenance of the secondary roads within the SFA.

Operational Phase

A total of two (2) persons are employed to carry out various operational task as it relates to the logging operation. Toilet facility entail two (2) Pit Latrines. Working hours will be from 8:00 to 4:30 from Monday to Friday.

On site there are two camps with camp one (1) having the dimension of 20×60 and camp two (2) dimension is 20×20 along with one (1) pit latrine on site.

Equipment on site are as follows:

- One (1) chainsaw
- One (1) tractor.
- One (1) generator (100Kva)

Water for drinking will be purchase and taken to the operation as needed. Water for domestic purposes is source from creeks and other water ways located within the SFA.

Personal Protective Equipment (PPE) will be provided to all employees such as long boots, helmets, air muff, dust mask and visibility vest. Additionally, one first aid kit and one snake bit kit is present on site at all time.

Waste Management

Hazardous waste

Fuel will be stored on site; fuel such as diesel will be stored in 45-gallon drum and also gasoline is stored in 45-gallon drum as well. Fuel will be stored with the waste oil generated from the servicing of the tractors and generator set at a designated area within the SFA located approximately 250 meters away from creeks and other water ways.

Waste oil generated from the servicing of the tractor once per month will be amounted to approximately five (5) gallons and that will be stored in tightly covered five gallons plastic containers and are reused in the chainsaws which is stored in a designated area within the SFA.

Solid waste Management

Domestic waste inclusive of plastics bottles, vegetable skins, food scraps, etc. are placed in a waste pit located approximately three hundred (300) meters away from creeks and other water ways within the SFA and when fill will be covered with soil and another waste pit is dig.

Sawdust that are generated from the harvesting of logs are left to decompose in the area.
