The land is located at 15 De Buff Canal #2 Polder West Bank Demerara. It is situated on the southern side and it is about 575 rods in length and 60 feet in width which is 4 rods 2 feet. We receive water through PVC pipelines and taps from the Guyana Water Incorporation (GWI). On the land there are two buildings, one Infront and one behind. The workshop would be situated behind the 2 building. Electricity is supplied by a mobile welding plan generator which will basically used for cutting (acetylene and oxygen), welding, sanding.

Construction of the workshop is done by zinc and hollow block for store room and welding room which will be enclosed separately to avoid noise and safety of equipment. The building will be supplied with solar lights in and around. The eastern side of the workshop, there is a house and on the other side there is a vacant lot. All waste materials paper would be disposed in bins and be disposed by Cevons, material waste will be sold for scrap iron and some will be buried.

Types of work that will be done at the workshop would be fabricating grill, pump, cage wheel, truck chassis and truck tray. All contacts and communications are done via phone.
